> ***Controlled template — counsel review and local adoption required.*** *This document is a company policy or reference framework. 1. Purpose and access

This checklist defines the controlled employee file. It is a record of what must exist, not a place to store identity documents, medical records, bank details or tax identifiers. Those records belong in the restricted HR file and the approved payroll system. Access must be limited to People Operations, Legal, Payroll and the employee's manager on a need-to-know basis.

A file is complete only when every applicable item is complete or has a documented, lawful reason for not being applicable. An item marked complete must have an evidence reference that can be produced. A missing item must have a named owner and a follow-up date.

2. Global employee-file sections
