TRADINGBIBLE HOLDINGS, INC.

Brokerage & Platform Separation

Trading software · future broker business · regulated activity boundaries

TRADINGBIBLE.APP • DELAWARE, UNITED STATES • OCTOBER 2026

Issuer: TradingBible Holdings, Inc., a Delaware corporation. Sole stockholder and director: Malik Nlem (ownership represented by management; confirm against signed company records). Proposed asset: TradingBible Coin (TBC). Planned maximum supply: 100,000,000 TBC.

1. Purpose and business architecture

TradingBible's wider roadmap includes trading charting and analysis software, order flow, heatmaps, broker-account integrations, a proprietary trading terminal, and potential brokerage services. The proposed TBC issuance must be analyzed independently from the legal requirements for any broker, exchange, custodian, investment adviser or payment service.

2. Activity-by-activity boundary

Activity	Proposed operator / control	Legal distinction
Charts, research and educational software	TradingBible technology function	Review advice and market-data licensing
Broker account synchronization	API integration with third parties	Requires provider authorization and secure consent
Execution and client orders	Licensed broker or properly authorized entity	Cannot be assumed from corporate registration
Customer deposits and withdrawals	Approved financial or custody provider	Separate customer-money protections
Forex, metals, stocks and derivatives brokerage	Future regulated brokerage business	Jurisdiction-specific permissions and capital
Crypto spot and exchange services	Future regulated service	Separate digital-asset registration/licensing review
TBC issuance and distribution	Token issuer workstream	Offering and token-specific legal assessment

3. Entity and accounting separation

Counsel should decide whether regulated brokerage activities require one or more separately licensed subsidiaries or affiliates. Separate bank accounts, books, personnel authorizations, customer contracts, risk management and capital should be maintained as required by the relevant regime.

TBC sale proceeds must not be represented as protected brokerage client deposits or commingled with segregated customer trading funds. Holding TBC should not be advertised as providing broker membership, guaranteed trading privileges or investment returns unless those rights are real and lawfully offered.

4. Infrastructure and API controls

Any MT4/MT5 or other bridge must be supported by lawful broker/server licensing, permissioned APIs, identity and account consent, logging, secure secrets management, transaction controls and audit trails. A self-hosted MT_BRIDGE_URL or token does not confer brokerage authorization.

5. Market data and public representations

Real-time pricing, chart redistribution, order-flow data and third-party trademarks may require exchange, venue or vendor licensing. The company should distinguish simulation, analytics, introducing arrangements, white-label services and actual execution services in product descriptions.

6. Roadmap and launch gates

The issuer may pursue software launch, token prototype, permitted token distribution and regulated brokerage development on separate schedules. No business line should be described as licensed, insured, operational or approved without contemporaneous evidence.

Decision and evidence register

The following matters require written confirmation before the relevant terms are adopted or represented as operational. Attach the cited evidence to the controlled project record.

Decision / evidence item	Responsible party	Record or outcome
Legal entity map and licensing strategy	Corporate / regulatory counsel	_____
Software versus regulated service inventory	Product / legal	_____
Client money and custody separation	Finance / compliance	_____
Broker integration agreements and market-data rights	Technology / legal	_____
Website claims and go-live evidence	Marketing / compliance	_____
