TRADINGBIBLE, INC.

Website Purchase, Custody & Refunds

Proposed transaction journey · control architecture

TRADINGBIBLE.APP • DELAWARE, UNITED STATES • OCTOBER 2026

Issuer: TradingBible, Inc., a Delaware corporation. Sole stockholder and director: Malik Nlem (ownership represented by management; confirm against signed company records). Proposed asset: TradingBible Coin (TBC). Planned maximum supply: 100,000,000 TBC.

1. Distribution channel

The proposed distribution channel is tradingbible.app. A website being operational does not establish that token sales are authorized or active. Any purchase function must remain disabled until the issuer has completed the applicable legal, security, payment and launch controls.

2. Proposed purchaser journey

1. Visitor receives current whitepaper, risk disclosures, eligible-country information and terms before making a purchase decision.

2. Purchaser creates an account and completes identity, age, beneficial-owner and sanctions checks appropriate to the jurisdiction and risk profile.

3. System determines eligibility, including residency, location, customer classification and applicable offering restrictions.

4. Purchaser reviews price, fees, amount, delivery conditions, cancellation rights and custody arrangement before accepting terms.

5. Payment is initiated through an approved provider or supported on-chain method; the issuer records transaction and reconciliation references.

6. After final settlement and compliance approval, TBC is delivered to an eligible wallet or held under an explicitly agreed custody arrangement.

7. Customer receives confirmation, records of payment and token delivery, and a documented complaint or refund channel.

3. Payment methods and provider selection

Fiat card, bank transfer, stablecoin and other digital-asset payments are possible technical options, not confirmed accepted methods. Each requires provider due diligence, lawful processing, chargeback handling, sanctions screening, settlement timing, fees and currency conversion disclosures.

Do not describe an escrow account or regulated custody arrangement unless the relevant agreement, account ownership, permissions and control mechanisms actually exist.

4. Custody and wallet security

The issuer must decide between self-custody delivery and third-party custody, and must document key management, multisignature authorization, withdrawal limits, recovery procedures, reconciliation, incident escalation and liability allocation. Customer assets must not be treated as unrestricted company treasury assets.

5. Refunds, failures and disputes

The refund policy must identify when an order becomes final, treatment of rejected KYC, payment failure, overpayment, underpayment, duplicate transfers, network outages, misdirected wallets, chargebacks and legal cancellation rights. A blanket 'no refunds' clause may be ineffective where mandatory consumer law applies.

Where delivery fails or a purchaser is ineligible, the issuer should follow a documented remediation process, including tracing the original payment route, sanctions review, transaction fees and time-bound communications.

6. Records and safeguards

Retain time-stamped terms acceptance, version of disclosures shown, eligibility decision, payment authorization, settlement, wallet delivery, refunds, customer correspondence and incident records subject to applicable privacy and retention rules.

Decision and evidence register

The following matters require written confirmation before the relevant terms are adopted or represented as operational. Attach the cited evidence to the controlled project record.

Decision / evidence item	Responsible party	Record or outcome
Approved payment methods and provider contracts	Finance / legal	_____
Custody model and wallet controller	Security / legal	_____
Jurisdiction gating and KYC vendor	Compliance	_____
Final refund triggers and time limits	Legal / operations	_____
End-to-end payment and delivery testing	Engineering / audit	_____

Review and acknowledgment

This page records receipt, review, or internal approval in the capacity identified below. A reviewer's acknowledgment does not itself constitute a regulatory approval or formal legal opinion.
