TRADINGBIBLE, INC.

TBC Supply, Allocation & Vesting

Economic framework · proposed distribution controls

TRADINGBIBLE.APP • DELAWARE, UNITED STATES • OCTOBER 2026

Issuer: TradingBible, Inc., a Delaware corporation. Sole stockholder and director: Malik Nlem (ownership represented by management; confirm against signed company records). Proposed asset: TradingBible Coin (TBC). Planned maximum supply: 100,000,000 TBC.

1. Supply policy

The proposed fixed maximum supply is 100,000,000 TBC. This is a maximum supply design parameter, not evidence that any tokens have been issued. The issuer should maintain a signed supply ledger identifying mint authority, contract addresses, circulating balances, locked allocations, burned balances and bridge liabilities.

2. Illustrative allocation for discussion

The following percentages are an illustrative scenario for management and legal review only. They are not approved allocations, sale commitments or representations of existing ownership.

Category	Illustrative share	Illustrative TBC
Community and ecosystem incentives	30%	30,000,000
Public or permitted distribution	20%	20,000,000
Development and operations	20%	20,000,000
Treasury and reserves	15%	15,000,000
Team and contributors	10%	10,000,000
Partnerships and liquidity planning	5%	5,000,000
TOTAL	100%	100,000,000

3. Vesting framework for consideration

Team and contributor allocations could be subject to a 12-month cliff followed by 36 months of monthly vesting. Treasury allocations could require documented dual approval and periodic public reporting. Partnership allocations should be governed by written milestones and clawback provisions where lawful. These are options, not established terms.

No discretionary acceleration, related-party transfer, token lending or market-making activity should occur without written authority, conflicts review and disclosure assessment.

4. Sale economics and disclosure

Before any offering, management must decide the price or pricing mechanism, accepted currencies, minimum and maximum purchase sizes, target proceeds, hard cap, delivery schedule, allocation priority, oversubscription handling, fee treatment, tax considerations and refund triggers. Any changes after publication require version control and purchaser communication.

5. Treasury and reconciliation

Maintain segregation between company operating funds, token sale proceeds, customer assets and any broker-related client money. Record every token allocation and transfer with transaction references, wallet attribution and authorization evidence. At each migration stage, reconcile locked, burned, minted and circulating balances across both networks.

6. Restrictions and economic risks

Token allocations may create concentrated ownership, dilution-like market effects despite fixed supply, liquidity shocks and conflicts of interest. Vesting and transfer restrictions may be technically or legally difficult to enforce; these risks should be reflected in purchaser disclosures.

Decision and evidence register

The following matters require written confirmation before the relevant terms are adopted or represented as operational. Attach the cited evidence to the controlled project record.

Decision / evidence item	Responsible party	Record or outcome
Final category allocations and beneficiaries	Sole stockholder / finance	_____
Price, caps and sale timeline	Sole stockholder / counsel	_____
Vesting contracts and release controls	Engineering / finance	_____
Treasury custody and approval thresholds	Finance / compliance	_____
Independent economic and security review	External specialists	_____
